

THE TRANSMISSION OF INTERNATIONAL MONETARY POLICY SHOCKS ON FIRMS EXPECTATIONS AND DECISION: DISCUSSION

Tumisang Loate

University of Pretoria

29 November 2022

OVERVIEW OF THE PAPER

- Broad: Investigate the effect of foreign shocks, US MP, on SOEs
- Specific focus on firm's expectations and decisions
- Relates to the literature on international spillovers of US MP owing to its "exorbitant privilege of the USD" and GFC
- Contribution: Interaction between GFC and firms' expectations of the local economy

SUMMARY OF THE FINDINGS

- US MP shock reduces firms' 1 and 2-year ahead inflation and cost expectations
- Heterogeneity depending on firms' debt level and denomination of the debt
 - **Expectations:** Cost expectations for foreign-currency borrowers increase relative to others less exposed but no significant effect on inflation expectations for this group
 - **Decisions:** Firms reduce their foreign-denominated debt after a contractionary US MP shock
 - Firms with foreign exposure increase their imports

Data: While Uruguayan peso does depreciate after US MP, no evidence of reduction in actual inflation

QUESTIONS OR FURTHER DISCUSSIONS

1. Medium to long-term foreign debt react to the US MP shock - is this response simply reducing the exposure to dollar-denominated debt or is there some substitution with locally-currency debt or bank loans? Do firm characteristics matter?

QUESTIONS OR FURTHER DISCUSSIONS

1. Medium to long-term foreign debt react to the US MP shock - is this response simply reducing the exposure to dollar-denominated debt or is there some substitution with locally-currency debt or bank loans? Do firm characteristics matter?
2. ST foreign-debt not affected by same shock - didn't really get the potential reason(s) for this findings?

QUESTIONS OR FURTHER DISCUSSIONS

1. Medium to long-term foreign debt react to the US MP shock - is this response simply reducing the exposure to dollar-denominated debt or is there some substitution with locally-currency debt or bank loans? Do firm characteristics matter?
2. ST foreign-debt not affected by same shock - didn't really get the potential reason(s) for this findings?
3. If cost expectations increase, is "hoarding" imported goods for precautionary reasons not adding to the cost and why increase imports if you're expecting a recessionary effect on the local economy?

QUESTIONS OR FURTHER DISCUSSIONS

1. Medium to long-term foreign debt react to the US MP shock - is this response simply reducing the exposure to dollar-denominated debt or is there some substitution with locally-currency debt or bank loans? Do firm characteristics matter?
2. ST foreign-debt not affected by same shock - didn't really get the potential reason(s) for this findings?
3. If cost expectations increase, is "hoarding" imported goods for precautionary reasons not adding to the cost and why increase imports if you're expecting a recessionary effect on the local economy?
4. Yes, US MP shock affects firms' decision - how much is this shown in investment and labour market data in Uruguay?

QUESTIONS OR FURTHER DISCUSSIONS

1. Medium to long-term foreign debt react to the US MP shock - is this response simply reducing the exposure to dollar-denominated debt or is there some substitution with locally-currency debt or bank loans? Do firm characteristics matter?
2. ST foreign-debt not affected by same shock - didn't really get the potential reason(s) for this findings?
3. If cost expectations increase, is "hoarding" imported goods for precautionary reasons not adding to the cost and why increase imports if you're expecting a recessionary effect on the local economy?
4. Yes, US MP shock affects firms' decision - how much is this shown in investment and labour market data in Uruguay?
5. Policy framework - should we really blame the US for lack of monetary policy independence?
