

# Reigniting investment in South Africa

Confidence, credibility and reform

5 March 2026

Roy Havemann

# Outline

- What do we know about investment? Some stylised facts
- Why has investment been so weak?
- What can be done?

# Stylised facts

# Investment has contracted...

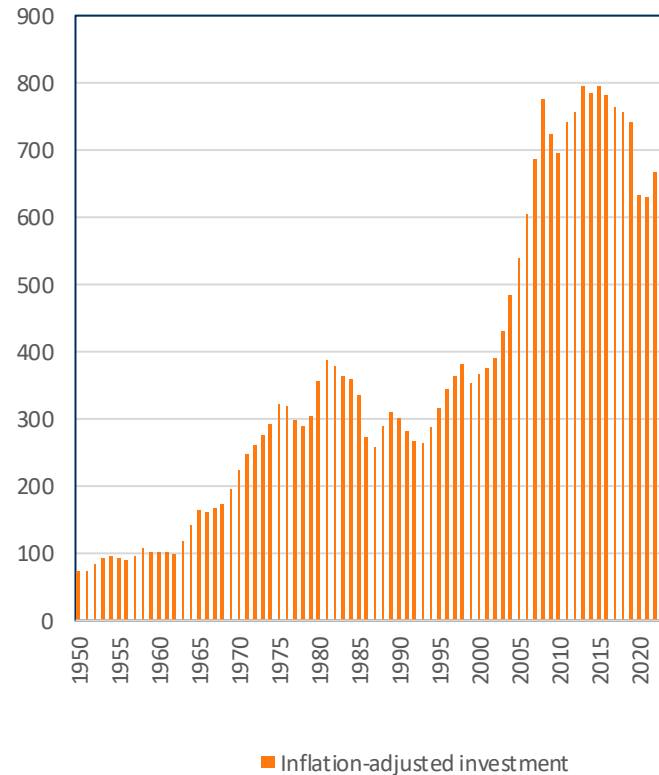

## Investment has contracted since 2015

Average investment growth by five-year period, 1950-2024

## Real investment is lower than in 2015

Level of real investment, Rbn, 1950-2024

## Investment-to-GDP near lowest in history

Investment-to-GDP, 1950-2024

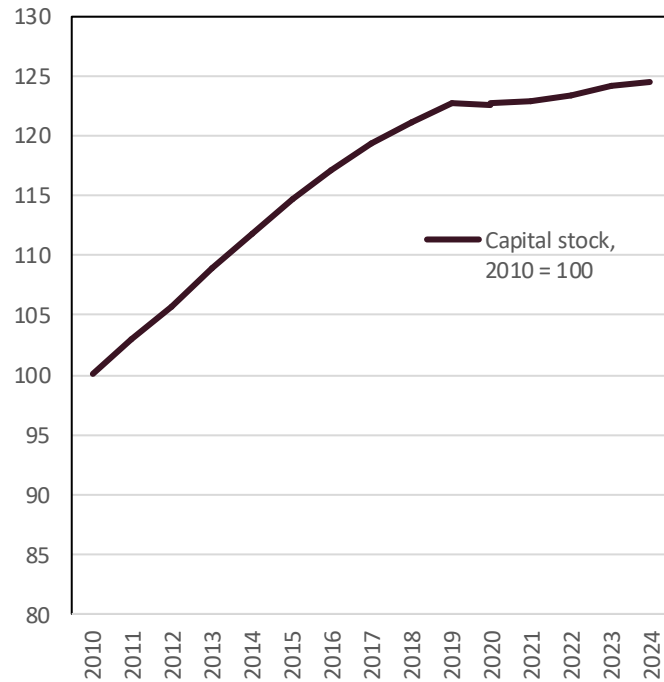

SARB Quarterly Bulletin, via BER Playground

# ... and become less productive

## Capital stock growth has slowed ...

Capital stock, 2010 = 100

## ... and productivity has declined...

GVA: Capital stock, 2010-2024

## ... most notably in elec., constr. and mining

GVA: Capital stock, 2010-2024

Source: SARB QB via BER Data Playground

# Which has unsurprisingly led to slowdown in the economy

Capital stock accumulation has not supported growth

Source: Havemann (2025) "Accounting for South Africa's significant growth deterioration"

- The 2010 – 2019 slowdown is associated with:
  - Some positive capital growth but that capital growth is unproductive
    - Into electricity and state-owned institutions
- Very weak overall productivity growth
- Post COVID has interestingly been a TFP story – the hypothesis is that after lockdown was lifted, firms restarted but didn't rehire or invest

# Some other interesting stylised facts

Investment share dominated by services...  
Share by sector

.. and into ICT, machinery, R&D and transport  
Average growth, 2021-2024

.. and currently held up by public corps  
Growth by period

# Why has investment been so weak?

# Why has investment been so weak?

## Expected demand

- Firms invest when they **expect higher future returns**. If investors expect stronger future profits (i.e. stronger economic conditions), equity prices rise, “Tobin’s q” increases, and investment follows.

## Certainty

- Investment **decisions are often irreversible** (once capital is installed, it cannot be fully recovered). When uncertainty about future demand, prices, or policy increases, firms prefer to delay investment until more information becomes available.

## The real interest rate / cost of capital

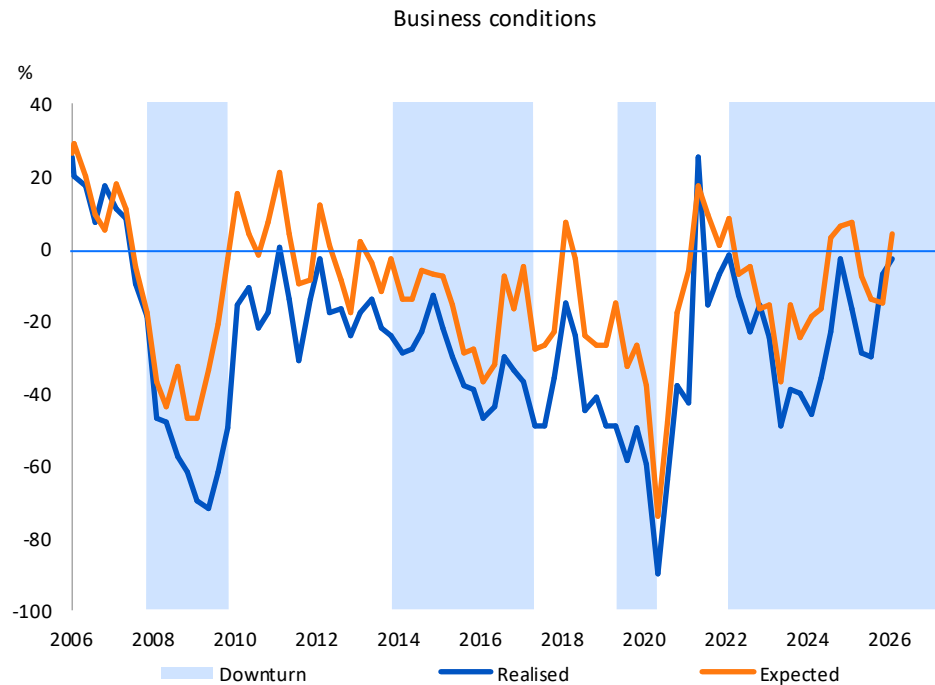

- A firm will continue to expand its capital stock as long as the **marginal product of capital exceeds the real user cost of capital**. The marginal product can be proxied by profit and the cost of capital by the real interest rate. Intuitively, a higher real interest rate should dampen investment.

# Why has investment been so weak?

## #1 Weak economic demand

Both realised and expected business conditions have been weak...

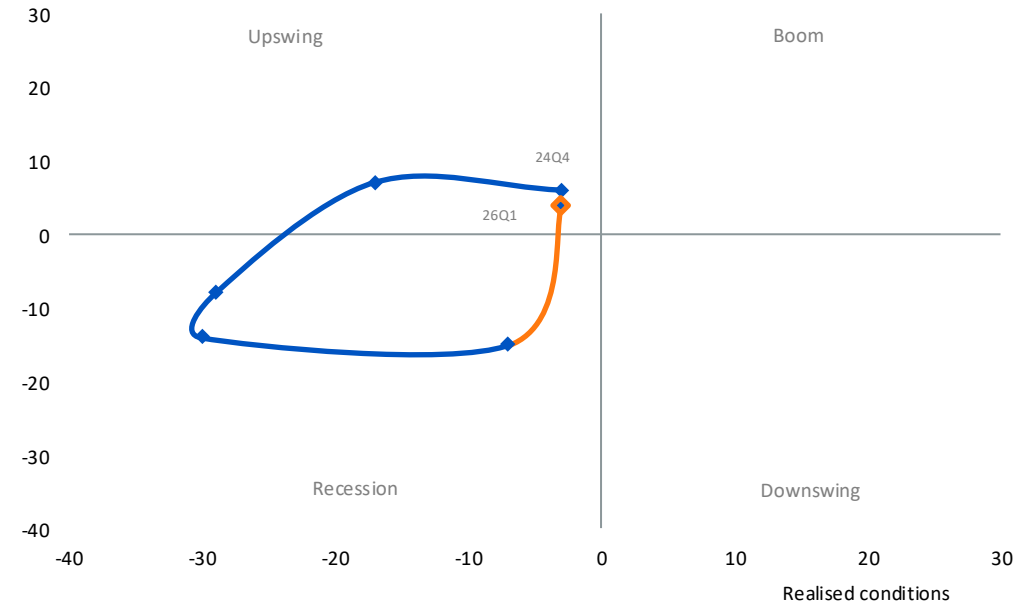

Business conditions

... but are showing signs of improvement

“Business cycle clock”

Expected conditions

Source: RMB/BER Business Confidence Index

# Why has investment been so weak?

## #2 Weak business confidence and “political climate”

Business confidence has been weak since 2008....

RMB/BER Business Confidence Index

Best level since 2021Q2

Source: BER, SARB (Shaded areas represent economic downswings)

... and the political climate is seen as a constraint to investment

ABSA Manufacturing Survey

— Manufacturing: political climate as a constraint to investment

# Why has investment been so weak?

## #3 Rise in real interest rates in part due to a fiscal deterioration

- Real borrowing costs have risen in part due to the fiscal deterioration
- Survey responses both quantitatively and qualitatively highlight the cost of credit

SARB via BER Data Playground and BER via Data Playground

# Why has investment been so weak?

## #4 Significant regulatory burden

A. Overall economy-wide Product Market Regulation indicator, 2023/2024

OECD, Economic Survey of South Africa (2025)

# What are the possible solutions?

# So how can we reignite investment?

**High real interest rates?** Fiscal discipline and regulatory costs

**Demand?** Structural reforms

**Business confidence?** Confidence improving measures

# #1 Fiscal-monetary coordination, achieved through a formal fiscal target

- Fiscal-monetary coordination can be seen as a strategic game
- Two neutral rates:
  - Monetary  $r$ -star  $\rightarrow$  neutral, inflation stabilising
  - Fiscal  $r$ -star  $\rightarrow$  neutral, debt stabilises
- Lowering nominal monetary  $r$ -star reduces fiscal  $r$ -star, making adjustment easier
- To complement new 3% inflation target, propose a 3% overall fiscal deficit target achieved through a consumption spending target

		<b>Monetary <math>r</math>-star</b>	
		<i>Lower-for-longer</i>	<i>Higher-for-longer</i>
<b>Fiscal <math>r</math>-star</b>	<i>Low</i>	<b>I. Weak fiscal adjustment; backloaded</b>	<b>II. Strong fiscal adjustment; front-loaded<sup>1</sup></b>
	<i>High</i>	<b>III. No adjustment needed</b>	<b>IV. Potential fiscal adjustment needed</b>

Source: Bolhuis (2025), Havemann and Hollander (2024, 2026)

## #2 Accelerate the Operation Vulindlela reform programme

- Operation Vulindlela provides a list of absolutely minimum reforms required to restore growth
  - Electricity
  - Ports and rail
  - Functioning municipalities
  - Visas for skills and tourism
  - Public transport

# #3 Restore confidence in key institutions to raise growth to 3%

- BER triangulated three things:
  - Quantitative analysis from our battery of surveys
  - Text inputs from our various sentiment and confidence surveys → fed this into a LLM to analyse what people bother to complain about
  - A structured engagement with ~40 CEOs, eminent economists, business people, and senior government officials at Mont Fleur, and a further engagement with ~20
- Gives us **nine priority actions**

CRIMINAL JUSTICE REFORM	PUBLIC SECTOR/LEADERSHIP REFORM	PROCUREMENT REFORM	STATE-OWNED ENTERPRISE REFORM
Overhaul the entire criminal justice system, starting with NPA	Enact the Public Sector Amendment Bill	Allow for more transparency in procurement	Appoint strong, independent and accountable boards to SOEs
Make the NPA financially and operationally independent	Amend sector-specific laws and regulations that stifle investment		
Address the illicit economy	Allow for big budget cross-departmental projects that attract private sector skills and funding		
	Improve the incentive system for public servants		

# What could the future look like?

# THE HADEDA

## SCENARIO 1: MUDDLING ALONG

THIS IS THE STATUS QUO, MAINTAINED.  
PARTIAL REFORM DELIVERS STABILITY,  
BUT THE ECONOMY DOESN'T SOAR.

IN THE HADEDA SCENARIO,  
THE ECONOMY FLIES LOW. ITS DIET IS  
RESTRICTED BY SKITTISH CONFIDENCE AND  
STRUCTURAL UNDERINVESTMENT.

FOR MOST SOUTH AFRICANS,  
THERE IS NO REAL PATH OUT OF POVERTY.

POLICY UNCERTAINTY  
CREATES INVESTOR  
UNCERTAINTY

URGENT CALLS FOR REFORM  
& RULE OF LAW ... NOT  
ECHOED IN PACE OF REFORM  
ACTION

MODEST TAX TAKE LIMITS STATE CAPACITY

SLOW GROWTH  
SHRINKS THE  
FISCAL HORIZON.  
(THE FIELD IS TIDY,  
BUT IT'S NO SAVANNAH)

# THE MARABOU

## SCENARIO 2: THE LOW ROAD

**AKA THE UNDERTAKER BIRD.**  
THE MARABOU ECONOMY SCAVENGES  
ON HOPE & BURIES GROWTH.  
BY FAILING TO REFORM, IT LOCKS IN DECLINE.  
POVERTY & UNEMPLOYMENT RISE.  
PER CAPITA INCOME FALLS.  
**POLITICS BECOMES EVEN MORE FRACTURED.**

IDEAL HOST  
FOR MAFIA  
PARASITES

RUBBISH IDEAS  
PROVOKE CAPITAL  
FLIGHT

INFLATION STARTS TO  
BUZZ — & THEN FLY

MORASS OF CORRUPTION  
KILLS GROWTH & RULE OF LAW

# THE AFRICAN FISH EAGLE

## SCENARIO 3: THE HIGH ROAD

AN ECONOMY THAT TAKES FLIGHT. DECISIVE STRUCTURAL REFORMS SUSTAIN A GROWTH RATE OF 3%. THEN THE FISH EAGLE BEGINS TO ALTER SA'S SOCIO-ECONOMIC TRAJECTORY. EMPLOYMENT GROWS, WAGES RISE, POVERTY SHRINKS.

LEGITIMACY & DELIVERY REINFORCE EACH OTHER.

# We run three scenarios around reform

	Baseline Stabilisation, not acceleration	Negative scenario Reform window closes	Positive scenario 3 × 3 × 3 in 3
Assumptions	<ul style="list-style-type: none"> <li>Incremental reform progress</li> <li>GNU broadly holds</li> <li>No major credibility shocks</li> <li>Gradual infrastructure improvement</li> </ul>	<ul style="list-style-type: none"> <li>GNU cohesion weakens</li> <li>Reform execution stalls</li> <li>Illicit economy expands</li> <li>Risk premia rise</li> </ul>	<ul style="list-style-type: none"> <li>Partnership-driven execution</li> <li>Rule-of-law dividend realised</li> <li>Illicit economy disruption improves compliance</li> <li>Risk premia compress</li> </ul>
Growth	<ul style="list-style-type: none"> <li>~1.5–1.8% over the medium term</li> <li><b>Investment recovery modest</b></li> <li>No structural breakout</li> </ul>	<ul style="list-style-type: none"> <li>Drifts toward ~0.5%</li> <li><b>Investment stagnates</b></li> <li>Low-growth trap entrenched</li> </ul>	<ul style="list-style-type: none"> <li>Rises toward 3% by 2028</li> <li><b>Sustained investment uplift</b></li> <li>Higher potential growth</li> </ul>
Inflation	<ul style="list-style-type: none"> <li>Trends toward 3% anchor</li> <li>Expectations broadly contained</li> </ul>	<ul style="list-style-type: none"> <li>Currency weakness lifts imported costs</li> <li>Expectations drift higher</li> </ul>	<ul style="list-style-type: none"> <li>Durably anchored near 3%</li> <li>Expectations firmly contained</li> </ul>
Repo rate	<ul style="list-style-type: none"> <li>Gradual easing</li> <li>Normalises in line with inflation moderation</li> </ul>	<ul style="list-style-type: none"> <li>Tighter-for-longer stance</li> <li>No meaningful easing</li> </ul>	<ul style="list-style-type: none"> <li>Settles ~50bps below baseline</li> <li>Easier financing conditions</li> </ul>
Other	<ul style="list-style-type: none"> <li>Rand broadly stable</li> <li>Bond yields ease gradually</li> <li>Deficit narrows slowly but remains elevated</li> </ul>	<ul style="list-style-type: none"> <li>Rand weaker</li> <li>Bond yields rise on higher risk premia</li> <li>Fiscal consolidation stalls</li> <li>Debt trajectory worsens</li> </ul>	<ul style="list-style-type: none"> <li>Rand firmer</li> <li>Bond yields decline meaningfully</li> <li>Deficit narrows toward 3% of GDP</li> <li>Debt stabilises earlier and lower</li> </ul>

# UPSIDE SCENARIO: 3x3x3 in 3

3% GDP growth ----- 3% inflation ----- 3% deficit ----- in three years

Municipal service delivery improvements, favourable LGE outcomes and a stable GNU → **business** confidence increases and **consumer** confidence follows

2026 **EAF** 5% higher than baseline, and 3% higher thereafter. Export bottlenecks are eased and **trade volumes** lift from 2027

**Credit easing** via partnership crowd-in → helps create a positive shift in financial media sentiment

Non-residential private **investment** ±10% level-shock by 2026/27; **investment** by government and public corporations +5%

**Inflation** anchored at 3% (stronger rand, anchored admin prices) → allows 50 bps more repo cuts than baseline

**CDS** narrows by max 50bps in 2027, easing to a 20bps plateau through 2030

**10-year yield** term premium: -50bps wedge from end-2026 onwards

Address the illicit economy, resulting in substantial **fiscal dividend** → helps deficit converge to 3% and increases govt. spending

Enabling foundation: OV reforms

*Catalyst: Partnerships + rule-of-law dividend + illicit economy fiscal gain*

# Conclusion

# Some concluding remarks

- The investment contraction has dragged down overall growth:
  - From an accounting perspective:  $Y = C + I + G + X - M$
  - From a long-run growth perspective:  $Y = A K L$
- Three actions can reignite investment
  1. Fiscal – monetary coordination --> bed down fiscal consolidation with a credible anchor that coordinates with the new inflation target
  2. Continue and accelerate OV reforms
  3. Confidence-boosting measures, mainly criminal justice reform, starting with the NPA
- A target of 3 x 3 x 3 in 3 would focus policymakers

# THANK YOU.

**Roy Havemann**
